PROFESSIONAL SUMMARY

Data Engineer with 4+ years of combined experience in data engineering and analytics, specializing in AWS, Snowflake, dbt Core, IBM DataStage, SQL, and Python. Designs and supports enterprise-scale ETL/ELT pipelines that move data from on-premises environments through Amazon S3 into Snowflake, with hands-on experience building layered data products across raw, transformation, enrichment, and consumption stages. Skilled in incremental dbt transformations, modular model design, data-quality controls, source-to-target reconciliation, geocoding and location-enrichment workflows, API-driven delivery, and Git-based CI/CD across DEV, QA/UAT, and PROD environments. Strong background in dimensional modeling, star and snowflake schema design, SQL query optimization, and stakeholder-facing analytics, with a track record of improving pipeline reliability, reducing manual effort, and delivering trusted datasets for regulatory, analytical, and business reporting. Comfortable operating across the full data lifecycle, from ingestion and transformation to governance, dashboarding, and production support in Agile environments.

TECHNICAL SKILLS

Databases & Warehousing: Snowflake (SQL, Query Optimization, RBAC, Secure Views), Amazon Redshift, SQL Server, PostgreSQL, MySQL

Data Modeling: Star Schema, Snowflake Schema, Fact & Dimension Modeling, SCD Type 1 & 2, Data Product Layers

ETL & Transformation: IBM DataStage, dbt Core (models, incremental models, macros, seeds, tests, docs), ELT/ETL, Data Contracts

Cloud & Integration: AWS (S3, Redshift, Glue, Athena), REST APIs, JSON, On-Premises Data Integration, Geocoding Workflows, Switchboard, Rata Comply

Programming Languages: Python, SQL, C

Data Processing: Apache Spark, PySpark, Spark SQL, Structured & Semi-Structured Data, Batch & Incremental Processing

CI/CD & DevOps: Git, GitHub Actions, Terraform, Docker, DEV/QA-UAT/PROD Deployment Pipelines

Data Quality & Governance: dbt Tests, Schema Validation, Source-to-Target Reconciliation, Data Contracts, RBAC, Row-Level Security

Reporting & Visualization: Power BI, Tableau, Snowflake Dashboards

PROFESSIONAL EXPERIENCE

Fifth Third Bank | Data Engineer | Chicago, Illinois

Mar 2024 – Present

- Designed and supported enterprise-scale ETL/ELT pipelines moving data from on-premises data warehouses into AWS S3 and Snowflake using IBM DataStage and DBT, standardizing ingestion and transformation workflows and improving end-to-end data availability by 30%.
- Engineered Snowflake data pipelines using Medallion Architecture (Bronze, Silver, and Gold layers), separating raw ingestion, cleansing/transformation, enrichment, and business-ready consumption to improve data quality, lineage, traceability, and maintainability across downstream data products.
- Developed and maintained modular dbt Core models using SQL transformations, model dependencies, jobs, tests, and documentation, reducing duplicated transformation logic by 35% across multiple data domains.
- Built incremental dbt processing workflows for daily ingestion of new and changed records, applying joins, filters, reference mappings, derived attributes, and business rules while reducing full-data reprocessing and Snowflake compute consumption by 25%.
- Developed IBM DataStage ETL workflows across multiple on-premises databases and source tables, performing extraction, filtering, schema mapping, reference-data enrichment, and standardized formatting before landing datasets in AWS S3 and Snowflake.
- Engineered a multi-stage ingestion framework using IBM DataStage, Amazon S3, Switchboard, JSON, and Snowflake to standardize movement of structured and semi-structured datasets through landing, raw ingestion, and downstream transformation layers.
- Developed geocoding and location-enrichment pipelines using address, city, state, region, assessment-area, and predefined classification data, reducing manual classification effort by 35% for regulatory and Community Development reporting.
- Implemented Git-based CI/CD across DEV, QA/UAT, and PROD, automating validation, testing, version control, and deployment of dbt models, Snowflake SQL objects, and DataStage components, and reducing manual deployment effort by 35%.
- Implemented automated data-quality and deployment gates using dbt tests, SQL validation, schema checks, source-to-target reconciliation, and data-contract validation, supporting reliable daily API-driven Snowflake delivery and reducing downstream data-quality defects by 30%.

LTIMindtree | Data Analyst | Hyderabad, India

Feb 2022 – Jul 2023

- Collected, cleaned, and transformed large datasets using SQL, Python, PySpark, and Spark SQL, improving data accuracy by 30% and preparing analytics-ready data for business reporting.
- Developed and maintained interactive Power BI dashboards to track KPIs and operational metrics, reducing manual reporting effort by 40%.
- Built and optimized ETL workflows using Python, Apache Spark, PySpark, and Spark SQL to consolidate data from 10+ source systems into centralized reporting datasets, improving data availability and processing consistency.
- Designed dimensional data models—fact and dimension tables—to support BI reporting and dashboard development.
- Performed large-scale data cleansing, profiling, deduplication, and quality validation using PySpark, Spark SQL, and SQL, reducing reporting discrepancies by 25% and improving downstream data reliability.
- Used Apache Spark and PySpark for distributed data processing, aggregations, joins, and transformations of high-volume datasets, supporting trend analysis and contributing to a 20% improvement in operational decision-making.
- Partnered with business stakeholders to gather reporting requirements and translate them into analytical solutions while working in an Agile environment—sprint planning, testing, documentation, and production support.

Aadhya Skills | Summer Intern | Tadepalli, Andhra Pradesh, India

Jun 2021 – Jul 2021

- Developed NI LabVIEW applications for automated sensor data acquisition, real-time monitoring, and control using NI hardware and DAQ modules.
- Designed and tested Virtual Instruments (VIs) for sensor calibration, data logging, signal visualization, and measurement analysis, improving the repeatability and reliability of instrumentation workflows.
- Performed signal conditioning, sensor validation, and calibration testing to improve the accuracy and reliability of acquired data.
- Gained hands-on exposure to machine vision, image processing, and basic machine learning concepts for automated analysis and pattern detection.
- Worked with mentors and project teammates to translate system requirements and test scenarios into LabVIEW-based monitoring and automation solutions, while documenting results and communicating discrepancies during validation cycles.

Tessolve | Summer Intern | Tadepalli, Andhra Pradesh, India

Jun 2021

- Completed hands-on internship training focused on the fundamentals of embedded systems, the Internet of Things (IoT), and industrial automation.
- Gained exposure to how sensors, embedded devices, and control systems are used to collect and process real-world data in automated environments.
- Learned fundamental concepts related to sensor interfacing, data acquisition, monitoring, and automation workflows.
- Explored the role of IoT-based communication and connected devices in monitoring and controlling industrial systems.
- Developed an understanding of how hardware, sensors, software, and control logic work together in industrial automation applications.

EDUCATION

Rowan University, Glassboro, NJ

Aug 2023 – Apr 2025

Master of Science, Data Science | GPA: 3.5

Relevant coursework: Data Warehousing, Database Management Systems (DBMS), Data Mining

KL University, India

Jul 2019 – Mar 2023

Bachelor of Technology, Electronics and Computer Science | Grade: 8.9
